
SOCURITY
WE PROTECT. YOUR DATA. YOUR USERS. YOUR BUSINESS.

General overview

WE PROTECT.
YOUR DATA.
YOUR USERS.
YOUR BUSINESS.

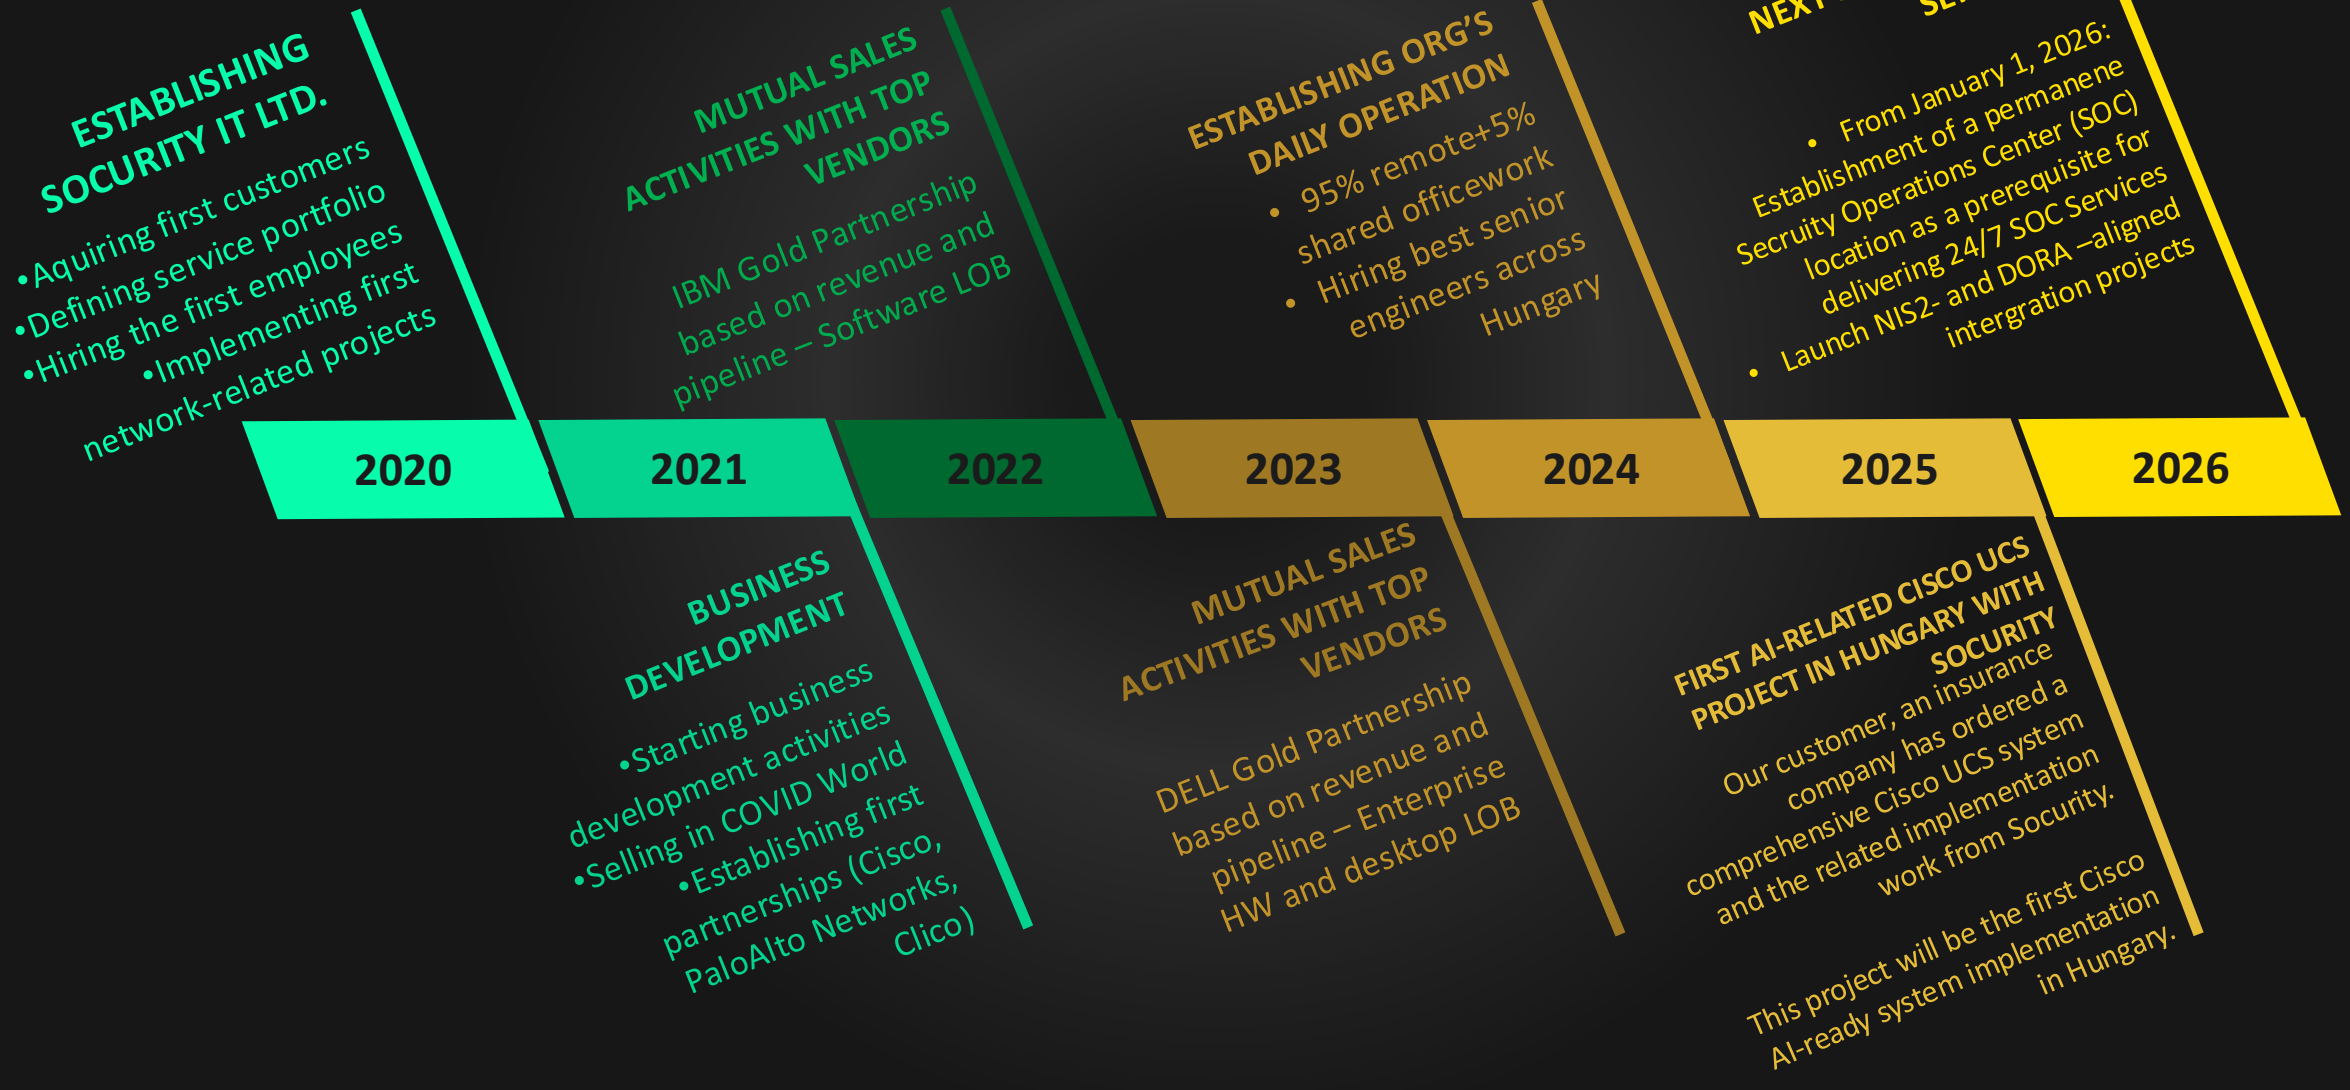
“

At our company, we have extensive experience across a wide range of cybersecurity and network solutions. We have established strong partnerships with leading vendors in the industry, holding silver or gold partnership status with most of them. This enables us to provide top-tier solutions and services tailored to meet the unique security needs of our clients.

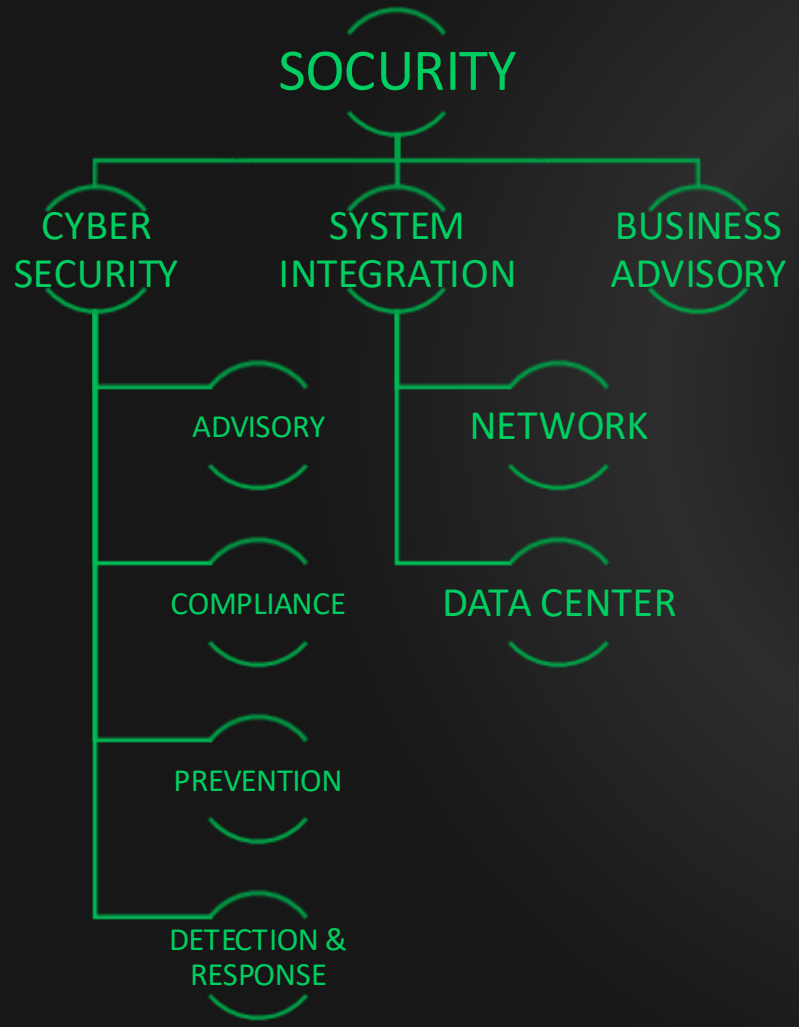
”

CyberSecurity focus, niche technologies, senior level knowledge in team, continuous growth, industry specializations

History&Future of Socurity IT Ltd.



EXPLORE OUR SERVICES



At SOCURITY, we stand at the forefront of safeguarding businesses in the digital age, offering tailored solutions through our three specialized divisions:

- Cybersecurity
- System Integration
- Business Advisory

We are not just providers of services: we are partners in your success. With a commitment to excellence, innovation, and the highest standards, we stand ready to elevate your business to new heights.

CYBERSECURITY DIVISION

SECURING YOUR BUSINESS IN A DYNAMIC CYBER THREAT LANDSCAPE

In an era marked by relentless digital transformation, securing your business against cyber threats is non-negotiable.

Our Cybersecurity Division comprises seasoned advisors and consultants who understand the intricate challenges faced by today's businesses.

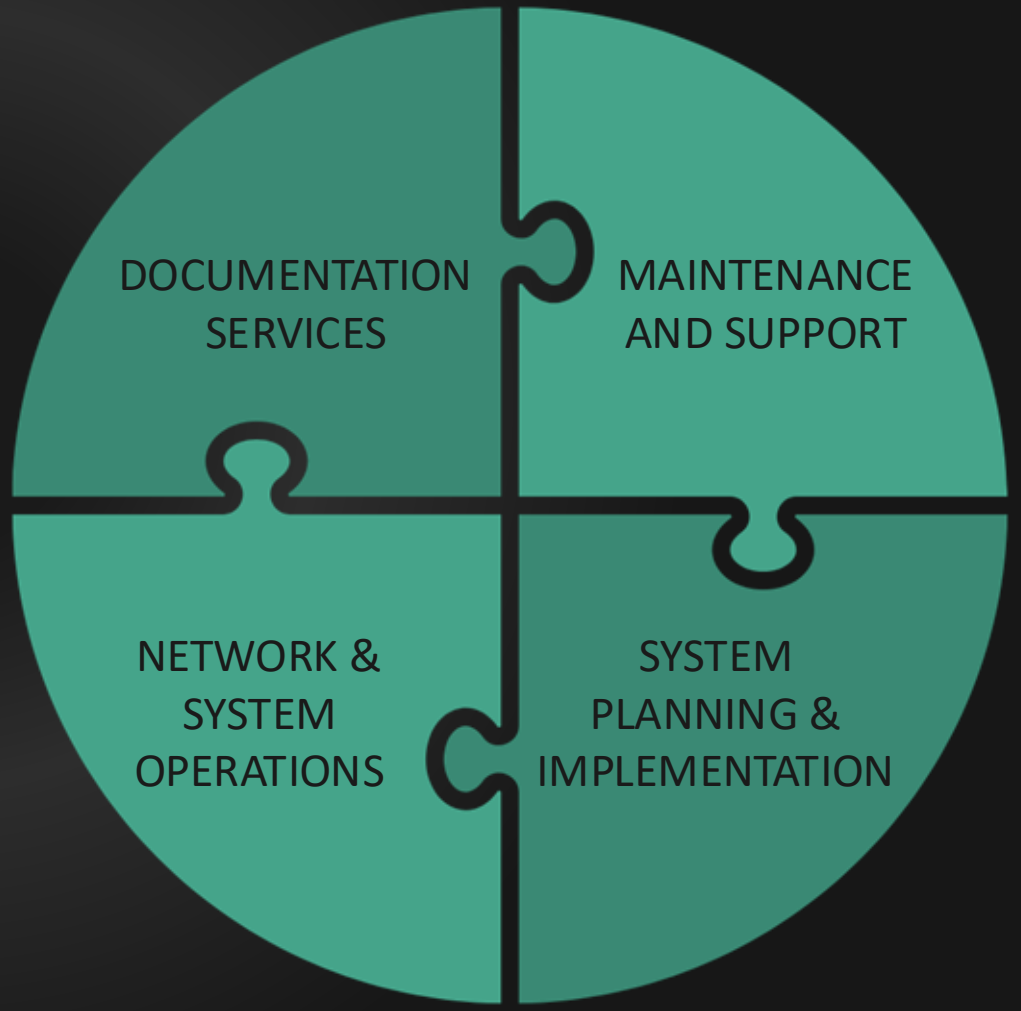
We offer comprehensive services, including strategic guidance, architecture design, prevention strategies, detection and response mechanisms, compliance solutions, and expert consultancy.

With a commitment to proactive protection, we empower businesses to navigate the ever-evolving threat landscape.

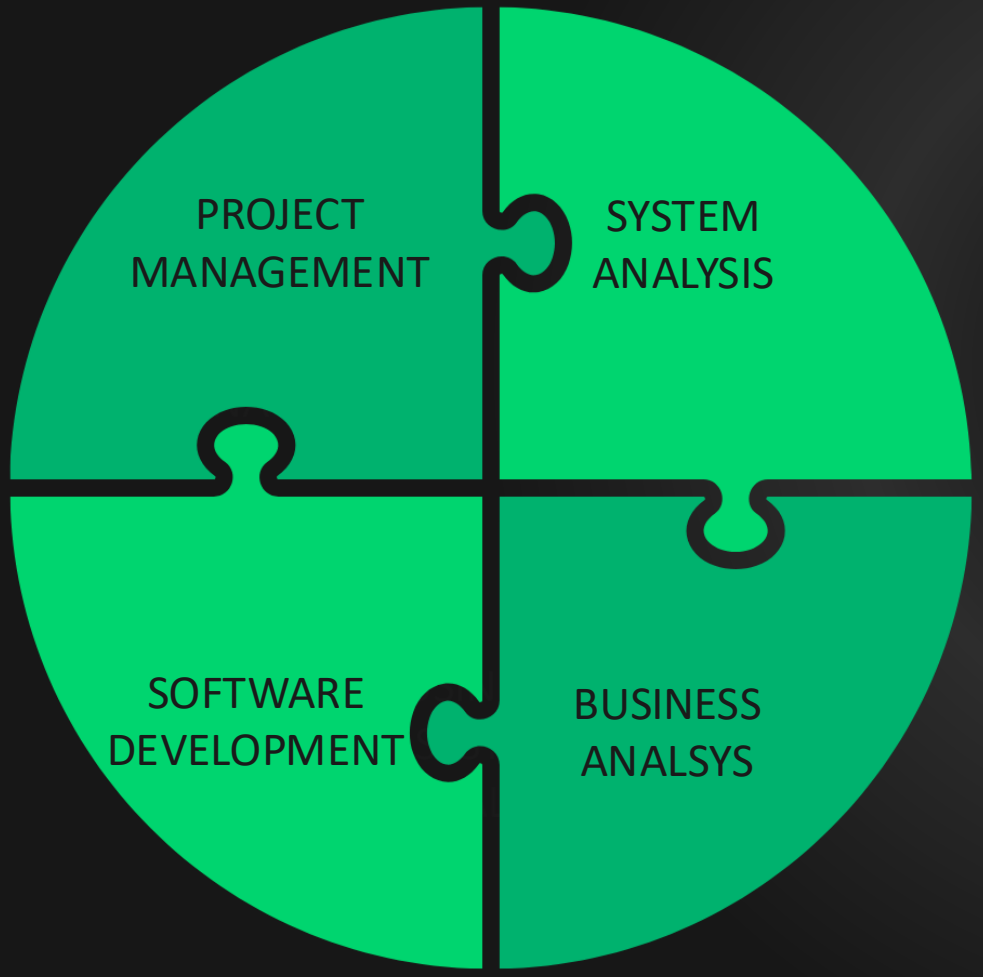
SYSTEM INTEGRATION DIVISION

Our System Integration Division specializes in designing, delivering, implementing, and maintaining greenfield projects, including on-premise, cloud, and hybrid networks, as well as data centers.

We also excel in brownfield projects, conducting comprehensive reviews of existing systems, performing upgrades, managing equipment procurement and implementation, and providing ongoing operational support. Our guiding principle in the planning process is 'security by design,' ensuring that security is a central focus at every stage.



BUSINESS ADVISORY DIVISION



Navigating the complex landscape of modern business requires not just strategic insight but also access to the right expertise at the right time.

Our Business Advisory Division goes beyond traditional consulting, introducing the revolutionary concept of "Experts-as-a-Service." Whether you need Project Management, Business Analysis, System Analysis, or expert guidance, our team seamlessly integrates with your operations, providing on-demand access to a pool of seasoned professionals. This innovative approach ensures that your business remains agile, responsive, and well-equipped to meet the challenges of today's dynamic business environment.

We help our customers with software development, automation and custom AI solutions – for smooth operation, we design and deliver high-performance AI-ready infrastructure.

SOFTWARE DEVELOPMENT

AUTOMATION. INTELLIGENCE. CUSTOM BUSINESS SOFTWARES

SyncShield Engine
– Automated Firewall & Configuration Intelligence

What It Does

- SyncShield Engine is a next-generation automation platform that continuously monitors, analyzes, and synchronizes **firewall rules, network objects, services, and VIP configurations** across vendor-agnostic environments.
- It eliminates manual maintenance by providing **full lifecycle management**, from change detection to validation, approval, and execution.

KEY CAPABILITIES

- **Real-time change detection:** Continuously monitors policies, objects, and configurations to identify any modification instantly.
- **Automated analysis & reconciliation:** Compares current and historical states, highlights differences, and updates the SQL-based configuration store.
- **Jira integration:** Automatically creates detailed change tickets, ensuring full traceability and audit readiness.
- **Bidirectional synchronization:** Keeps firewall rules and Jira Insight CMDB elements aligned and consistent.
- **Comprehensive object intelligence:** Handles address objects, groups, services, service groups, access lists, and VIP objects with precision.
- **Export, reporting & audit:** Generates structured logs, reports, and exports for engineering, SOC, compliance, and customer communication.

SyncShield Engine
– Automated Firewall & Configuration Intelligence

Business Value

Massive operational efficiency: Automates configuration drifts, reduces human error, and shortens engineering effort.

Improved security posture: Enables proactive incident prevention through continuous monitoring and validation.

Compliance-ready workflows: Ensures full documentation, traceability, and auditability of every firewall change.

Scalable & vendor-flexible: Designed to integrate with Jira and other IT/SecOps platforms, supporting enterprise-scale environments.

SERVICE SUPPLY

SCALABLE. AFFORDABLE. PREDICTABLE.

SECURITY AS A SERVICE

SECURITY AS A SERVICE

It is a subscription-based offering that provides continuous, enterprise-grade cybersecurity through integrated capabilities such as SOC, SIEM, EDR/XDR, SOAR, threat simulation, and proactive testing.
It delivers predictable costs while reducing cyber risk, ensuring regulatory compliance, and protecting business operations without the need for significant upfront investment.

DNSSEC – Domain Name System Security Extensions

Ensure the authenticity and integrity of DNS responses.
Protects users from being redirected to fraudulent websites, reducing financial and reputational damage.

BAS – Breach and Attack Simulation

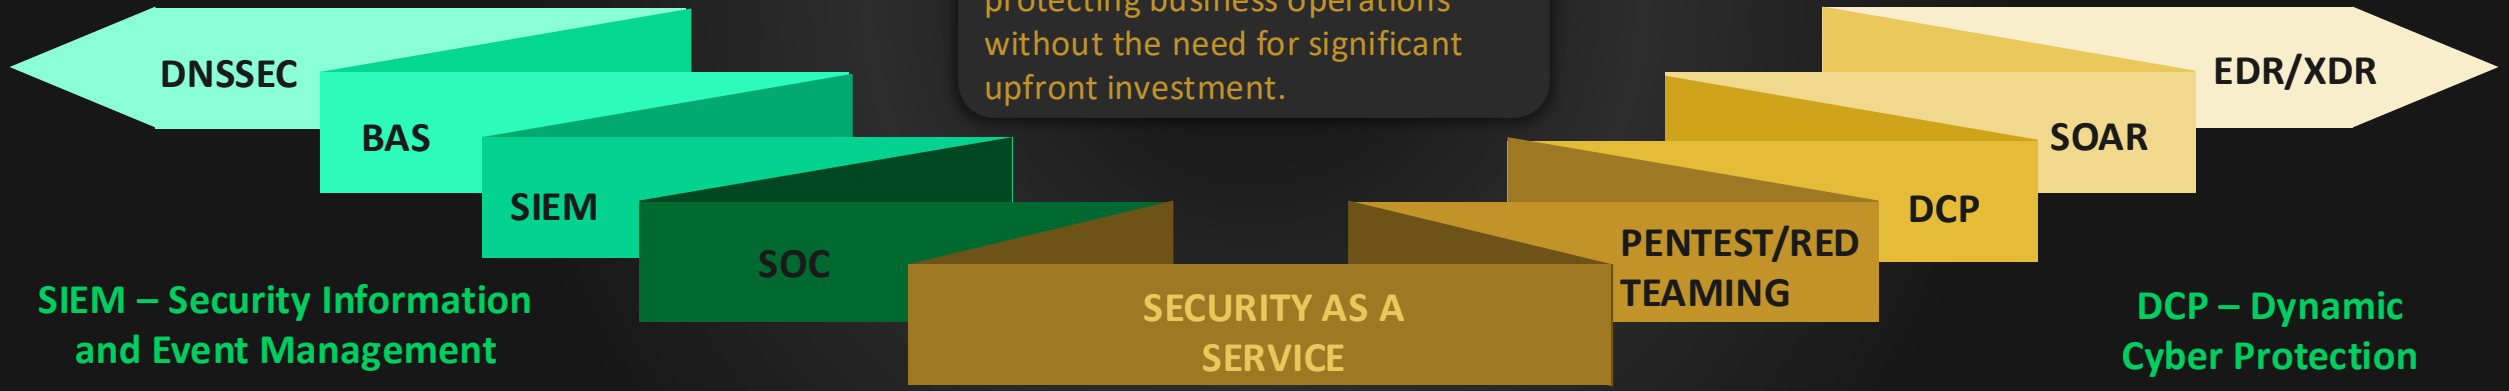
Automated technology that simulates cyberattacks against the environment. Provides assurance that existing security controls perform effectively in real-world scenarios.

SOAR – Security Orchestration, Automation and Response

A platform that orchestrates and automates security operations and response processes.
It lowers operational costs and accelerates incident handling by reducing manual effort.

EDR / XDR – Endpoint Detection and Response / Extended Detection and Response

A solution for detecting and responding to threats across endpoints and multiple security layers. It prevents infections from escalating into business disruption or data loss.



SIEM – Security Information and Event Management

A centralized platform for collecting, correlating, and analyzing security events.
It supports regulatory compliance and enables early identification of security risks.

SOC – Security Operations Center

A centralized organization responsible for security monitoring and incident handling.
It ensures continuous oversight, enabling faster incident response and reducing the risk of downtime and regulatory penalties.

Penetration Testing vs. Red Teaming

Penetration testing focuses on identifying specific technical vulnerabilities, while red teaming simulates realistic E2E attacks. Together, they help assess whether security investments effectively reduce business risk.

DCP – Dynamic Cyber Protection

A dynamically adaptive cybersecurity approach that responds to changes in the threat environment. It reduces operational and financial risk by automatically adjusting protection measures to current threats.

SOCURITY

ARTIFICIAL INTELLIGENCE

AUTOMATION. INTELLIGENCE. CUSTOM BUSINESS SOFTWARES

ARTIFICIAL INTELLIGENCE – OUR SOLUTIONS

AI Infrastructure & Purpose-Built Hardware

- We architect and deliver **high-performance, AI-optimized data center infrastructures** capable of supporting training, inference, and large-scale analytical workloads.
- Our hardware stacks are built on **GPU-accelerated systems** to achieve maximum throughput and efficiency.
- Full integration services ensure that compute, storage, networking, and MLOps pipelines work together as a cohesive, secure, and high-availability AI platform.

Custom Enterprise AI Solutions

- Leveraging IBM watsonX portfolio we design and build **fully customized AI and machine learning solutions** that address specific business challenges—not generic models, but systems engineered around your workflows, your data, and your objectives.
- Our platforms enable **AI-driven process automation, real-time decision support, intelligent workflows**, and seamless integration into existing enterprise systems.
- Our team manages the full lifecycle: **data assessment, cleansing, anonymization, feature engineering, model ops**, and continuous optimization to ensure long-term accuracy and business value.

OUR CERTIFICATIONS

PROVEN AUTHENTICITY.

Existing certifications

Security Certifications

- Facility Security Clearance with No Storage Capabilities
- national security clearance (personal certification for our owner)

Quality Assurance Certifications

- ISO/IEC 27001:2022
- EcoVadis Silver Badge, (90% for Ethics)

Vendors' qualifications

- 68 individual vendor's certifcates for 20 unique vendors
- 7 individual professional certificates (BTL, CompTIA, ISTQB, LetsDefend, LPIC, OSCP+)

Existing certifications

Security Certifications

- Facility Security Clearance with No Storage Capabilities
- national security clearance (personal certification for our owner)
- Cybervadis, Platinum Badge (986/1000)

Quality Assurance Certifications

- ISO/IEC 27001:2022

- EcoVadis Silver Badge, (90% for Ethics)

Strategic security supplier

At an international insurance firm:
- network+network security supplier
- Successfully closed DLP project

In progress: comprehensive datacenter project + AI transformation

Memberships of IT Procurement Frame contracts of Government

Our company is a contracted supplier under

- **HNET frame contract** (network active and passive infrastructure) and
- **ITBT frame contract** (IT security products and services),

awarded through open, centralized government procurement procedures managed by DKÜ (Digital Agency of Hungarian Goverment).
These frame contracts enable compliant, large-scale delivery of critical network and cybersecurity solutions to public sector organizations under pre-defined contractual terms.
Our participation demonstrates our ability to meet stringent technical, financial, and regulatory requirements in high-trust governmental environments.

DKÜ
Digitális Kormányzati Ügynökség Zrt.

Through the collaboration between HNET and ITBT, we provide our clients with a stable, long-term service presence in the public sector, while reinforcing our role as a trusted professional partner in the development of national digital and cybersecurity infrastructure.

Vendor Highlights

AI

watsonx

Network, Infrastructure and Security Solutions

Cisco, Dell, Juniper Networks, paloalto Networks, Fortinet, Veeam, Arista, Ruckus CommScope, Check Point

SIEM

splunk> a Cisco company, IBM QRadar

Identity and Access Management

Duo, Cisco, BeyondTrust, CyberArk

Endpoint Security

CrowdStrike, ivanti, jamf, SentinelOne

User and Data Security

Forcepoint, Thales, proofpoint

Cloud Security

Prisma by Palo Alto Networks, IBM, zscaler

Vulnerability Management

Qualys, tenable, Picus

Threat Intelligence

QUOINTELLIGENCE

Application Security

invicti, Acunetix by Invicti, radware, BlackDuck, imperva

Vendors and professional areas

Network Security

- Palo Alto
- Fortinet
- Check Point
- Forcepoint
- Forescout

Endpoint Detection and Response (EDR)

- CrowdStrike Falcon
- SentinelOne

Data protection and backup

- Veeam
- Thales
- Rubrik

Digital Risk Protection

- PhishLabs
- SOCradar

Application security

- Radware
- Acunetix
- Blackduck

Password Management

- Bitwarden
- Keeper
- 1Password

Endpoint Security

- CrowdStrikeFalcon
